Volaris S7 PATROL

Making your walk outdoors a breeze.

Volaris S7 PATROL is a stable rollator, with four large wheels, made from soft shock absorbing material, making your walk outdoors a breeze. The X-type design facilitates folding and ensures that the rollator stands steadily in the folded position.

The seat and handle height on the Volaris S7 PATROL can be easily adjusted. This means that one walker can be adapted to suit tall or short people. It would be particularly useful in situations where many different users depend on one walker to be adapted to their individual needs, for example in rehabilitation centres.

The backward pointing handles can also be adjusted to suit individual needs with a choice of anatomical, as well as cylindrical hand grips. Another unique feature of the S7 PATROL is a patented link system brake function. The travel and parking brakes are very accessible and contribute to a safe and effective braking action.

There are a range of different accessories available to ensure individual user needs are met.

The Volaris S7 PATROL is manufactured in Sweden from reusable material. Patents have been applied for covering both construction and design. The rollator is developed in accordance with the prevailing standard for walking aids, ISO 11199-2:2005

Kid

Light and flexible

Kid

Volaris S7 kid is the latest product in the Volaris family. Light and flexible rollators with functions to meet a child's special demand. The Kid has 50mm narrower and 100mm shorter frame together with the smaller wheels making it easier to manoeuvre in tight spaces.

With the unique Comfort Frame™ the rollator can easily manage uneven road surfaces. The construction allows it to fold easily and store in an upright position.

The seat and the handle can be easily adjusted in height allowing it to accommodate several children with different needs. The walker is equipped with Smart handle; this means that there are no hanging wires that can be caught in things and everything is encapsulated in the frame.

Both the process and the parking brake are ergonomically designed and easily accessible and contribute to high safety.

Volaris S7 Kid is made in Sweden of recyclable materials. Design and construction is patent pending. The walker is designed for existing standards for walking aids, ISO 11199-2:2005

Large accessory options to meet all special needs.
